What is the total area of the rectangle?

Area of the first rectangle = $3 \times 4 = 12$ square units.

Area of the second rectangle = $3 \times 2 = 6$ square units.

Total = $12 + 6 = 18$ square units

- (3) Amir wants to distribute 28 pieces of candy equally among seven of his friends. **How many pieces does each friend get?**

Number of pieces each friend gets = $28 \div 7 = 4$ pieces.

- (4) Using the number of rows and columns, determine the dimensions of each rectangle. **Calculate the area of the following rectangles:**

(a)

Area = $2 \times 5 = 10$ square units

(b)

Area = $3 \times 4 = 12$ square units

- (5) **What is meant by area?** Area is the number of **square units inside a shape.**

- (6) Draw a fact triangle for the numbers 4, 5, and 20. Then, write the multiplication and division equations.

Multiplication equations: $4 \times 5 = 20$, $5 \times 4 = 20$

Division equations: $20 \div 4 = 5$, $20 \div 5 = 4$

- (7) Hosny wants to build a fence around his flower garden in the shape of a rectangle with dimensions of 7 meters and 5 meters.

What is the total length of the fence he will need?

Answer: $P = 2 \times (7 + 5) = (2 \times 7) + (2 \times 5) = 14 + 10 = 24$ meters.
